

Multiplex HPC interchangeable insert for the machining of steel beams

Wechselplattenhalter Multiplex HPC Art.-Nr. 86684

The point geometry of the new interchangeable insert ensures optimal centering characteristics and therefore compensates unstable machining conditions in the machining of steel beams.

- ▶ new interchangeable inserts especially for the machining of steel beams
- ▶ reduced burr formation
- ▶ optimal centering characteristics
- ▶ smooth drilling performance
- ▶ particularly suitable for the use on drilling-sawing and drilling-burning lines

Minimised burr formation thanks to reduced point angle in outer area.

Multiplex HPC – The Modular System

The new interchangeable insert art. no 86729 can be applied with all Multiplex HPC standard holders 1xD, 1,5xD, 3xD, 5xD, 7xD and 10xD.
